PROFESSIONAL SUMMARY

Computer Science student with hands-on ML engineering experience — risk classification pipelines, precision/recall optimization — from a Data Science internship at a Japanese rail operator, and full-stack systems experience shipping production applications with Next.js, React, TypeScript, Supabase, and Tauri. Targeting Software Engineering and Applied AI/Data Science internships.

EDUCATION

AI Akhawayn University (AUI)

Ifrane, Morocco

Bachelor of Science in Computer Science — Expected May 2028

Relevant Coursework: Data Structures & Algorithms, OOP, Database Systems, Web Development, Software Engineering

EXPERIENCE

Hiroden (Hiroshima Electric Railway)

Hiroshima, Japan

Data Science Intern — 2025 – 2026

- Analyzed transportation and operational datasets spanning thousands of records, building operational risk classification pipelines in TensorFlow and PyTorch to flag accident risk factors from railway safety data
- Improved rare-event detection reliability by applying precision/recall optimization and feature importance analysis, isolating the operational variables most predictive of accident risk
- Performed end-to-end data cleaning, preprocessing, and exploratory data analysis to reduce noise and improve signal quality in operational datasets
- Collaborated cross-functionally with engineers and researchers to evaluate data-driven safety solutions, presenting findings and recommendations to stakeholders

PROJECTS

Hana — Manga Reader

hanamanga.online

Next.js, React 19, TypeScript, Supabase, Tauri

- Designed, built, and deployed a full-stack manga reading application (Next.js, React 19, TypeScript, Supabase, Tauri) aggregating content across three independent sources into a single unified interface
- Reduced upstream API failures by implementing rate-limiting and request throttling across the MangaDex, Atsu, and MangaKatana integrations
- Cut redundant network requests and improved perceived load speed by adding client-side caching for repeat content access
- Implemented third-party sync integrations with AniList and MyAnimeList for reading progress and library tracking across platforms
- Shipped a cross-platform desktop client using Tauri, extending the web app to native desktop environments

PokéLids Tracker & International Exchange

pokelidstrak.vercel.app

JavaScript, HTML/CSS, Database Management

- Built a location-based web app with a searchable database covering 100+ Pokémon manhole cover (PokéLids) locations across Japan, developed during an academic exchange in Hiroshima

Quran Recognition Application

Python, OpenAI Whisper, Speech Recognition, Audio Processing

- Developed a Shazam-style audio recognition system to identify Quran recitations, integrating OpenAI Whisper for speech-to-text and building a custom verse-matching pipeline

PokeDoro — Pokémon-Themed Pomodoro Timer

pokedorosf.vercel.app

React, Tailwind CSS, PokeAPI

- Built a gamified productivity timer featuring a visual HP bar, an in-app Pokedex, and a companion Pokémon that evolves as work sessions are completed
- Integrated PokeAPI for live Pokémon data and implemented persistent settings, dark/light mode, and custom sound effects and animations

LEADERSHIP & ACHIEVEMENTS

Hackathon Water Show — 1st Place

Mohammed VI Museum for the Civilization of Water in Morocco - AMAN

- Led a team of 4 to design and build a technology-driven water conservation solution, placing 1st among 20+ competing teams from across Morocco

International Exchange Program

Hiroshima, Japan

- Selected for a competitive international academic exchange; collaborated in a multicultural academic environment

Regional Public Speaking Competition — 3rd Place

SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Frameworks & Libraries: Next.js, React 19, Tailwind CSS, TensorFlow, PyTorch, Tauri

Databases & Backend: Supabase, RESTful API Design

Developer Tools & Infrastructure: Git/GitHub, OpenAI Whisper API, PokeAPI

Spoken Languages: Arabic (Native), French (Native), English (Fluent)
